electromagnetic energy which may cause interference to radio reception and which is emitted from: a) vehicles propelled by an internal combustion engine, electrical means, or both; b) motor boats propelled by an internal combustion engine, electrical means, or both; c) devices equipped with spark ignited internal combustion engines. IEC Standard - Home The EMC standards by the international and European committees IEC/CISPR (first meeting in 1933, evolving up to today) and the EMC regulations by the United States's FCC (first emission limits set in 1979) have been shaping the landscape of EMC testing on a global scale. Standards | Academy of EMC During a CISPR 12 radiated emissions test within the VTC, the emissions radiating from the vehicle are calculated as shown below: FI (dBuV/m) = Meter Reading (dBuV) + Antenna Factor (dB) + Cable Loss (dB) + Correlation Factor (dB) This FI is then compared to the radiated emissions limits specified in CISPR 12 to determine compliance.
