Since the exponent is negative, you will want to put the in the denominator in order to make it positive. So then, Fractional Exponents - Algebra II - Varsity Tutors $ (m^ {?})^ {3}=m^ {-12}$ To raise a power to a power, we multiply the exponents. Therefore, in order for this equation to be correct, the product of 3 and the first exponent must equal -12. The only way this would work is if the first exponent is -4 because $-4\times3=-12$. Therefore, the correct equation is $ (m^ {-4})^ {3}=m^ {-12}$ You can search Google Books for any book or topic. In this case, let's go with "Alice in Wonderland" since it's a well-known book, and there's probably a free eBook or two for this title. The original work is in the public domain, so most of the variations are just with formatting and the number of illustrations included in the work. However, you might also run into several copies for sale, as reformatting the print copy into an eBook still took some work. Some of your search results may also be related works with the same title.
