A linear circuit is an electronic circuit which obeys the superposition principle. This means that the output of the circuit $F(x)$ when a linear combination of signals $ax_1(t) + bx_2(t)$ is applied to it is equal to the linear combination of the outputs due to the signals $x_1(t)$ and $x_2(t)$ applied separately: $(+) = + ()$ It is called a linear circuit because the output of such a circuit is a ...
