Reasoning : studies of human inference and its foundations ... Inferences are steps in reasoning, moving from premises to logical consequences; etymologically, the word infer means to "carry forward". Inference is theoretically traditionally divided into deduction and induction, a distinction that in Europe dates at least to Aristotle. Deduction is

inference deriving logical conclusions from premises known or assumed to be true, with the laws of valid inference being studied in logic. Induction is inference from particular premises to a universal conclusion Inference - Wikipedia Deduction is a general-to-specific form of reasoning that goes from known truths to specific instances. Inductive reasoning is a specific-to-general form of reasoning that tries to make generalizations based on specific instances. Abductive reasoning is a specific-to-general form of reasoning that specifically looks at cause and effect. Reasoning and Inference | Boundless Psychology Reasoning - edited by Jonathan E. Adler May 2008. Uncertainty is an unavoidable aspect of the human condition. Many significant choices must be based on beliefs about the likelihood of such uncertain events as the guilt of a defendant, the result of an election, the future value of the dollar, the outcome of a medical operation, or the response of a friend. Extensional Versus Intuitive Reasoning: The Conjunction ... Studies of human efficiency in deductive inference involves conditional reasoning problems which follow the "if A, then B" format. Deductive reasoning is a basic form of valid reasoning. Deductive reasoning, or deduction, starts out with a general statement, or hypothesis, and examines the possibilities to reach a specific, logical conclusion.
